Value-added secondary by-products from food industry and municipal waste

EcoFoodInnovations

The purpose of the planned project is

to create a joint business model based on the recycling of materials in co-operation with SMEs

to create an eco label for high added-value products made from the sideflows of food industry and biodegradable municipal waste in order to promote the significant penetration to market

Possible products are e.g. green covers, growth media and growth promoters from waste-derived materials and biological fertilizers.

The project will be implemented and coordinated by Agropolis Oy in co-operation with SMEs and research institutes.

We are looking for European partners for the project application to Eco-Innovation programme.
